

HOSPITAL MANAGEMENT SYSTEM

INTRODUCTION

- ▶ Hospital Management System is a digital platform designed to manage all hospital operation efficiently.
- ▶ Helps to maintain accurate digital patient records.
- ▶ Reduces paper work and time.
- ▶ Provide quick access to medical information .
- ▶ Improves data security and hospital efficiency

Comparing the old and New systems

OLD SYSTEM PROBLEMS

- ▶ Everything was done manually
- ▶ Hard to find patient records
- ▶ Time-consuming process
- ▶ High chances of errors
- ▶ Paper files could get lost or damaged
- ▶ Difficult to update information

NEW SYSTEM BENEFITS

- All records stored digitally
- Easy to access and update
- Fast and accurate process
- Highly secure data storage
- Reduces paperwork
- Improves hospital efficiency

Why Go Digital?

Faster Processes

Digital systems automate manual work to automate time.

Improved Accuracy

Data entry, reports and records with less human error chance.

Easy Data Storage & Access

All information safely stored, and accessed instantly and securely.

Better Security

Keep data secure with data secured via password, encryption, access control.

Cost-Effective

Paper, files, and manual labor costs.

Real-Time Updates

Data updates, faster, more decision-making.

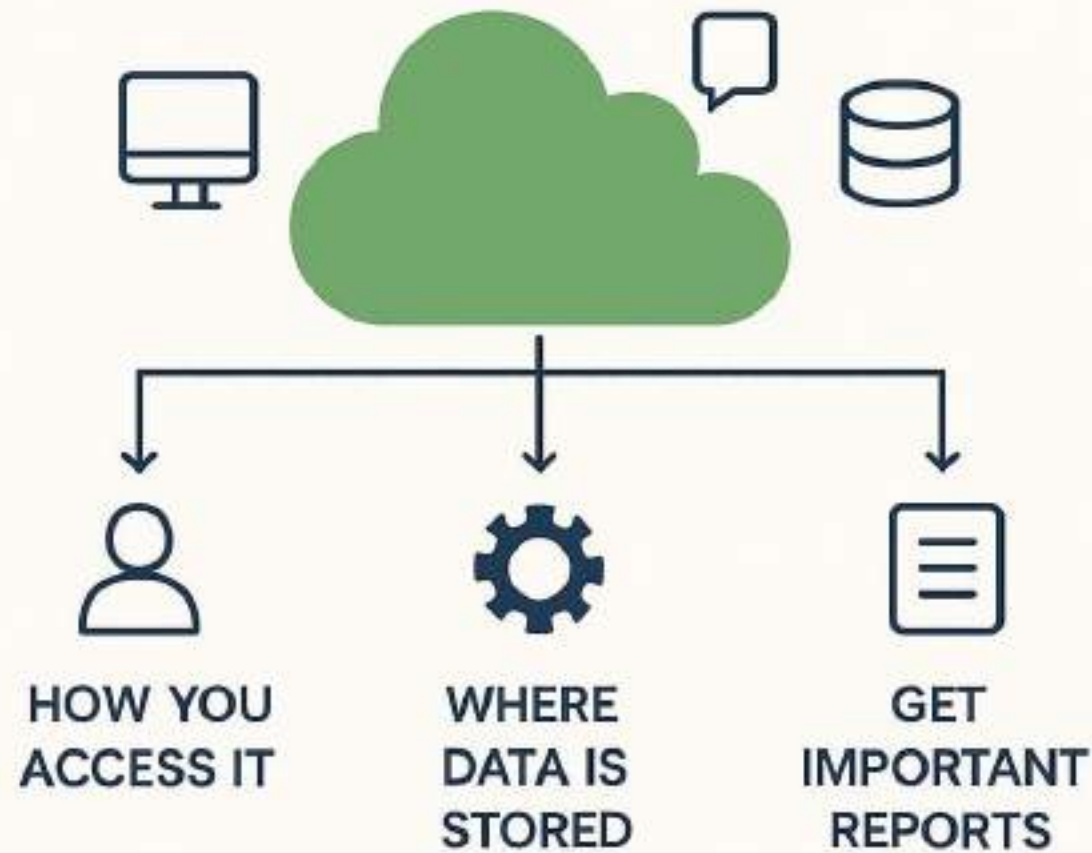

Improved Customer/Patient Experience

Less waiting time, faster services, smoother.

SYSTEM ARCHITECTURE AND WORKFLOW

SYSTEM ARCHITECTURE AND WORKFLOW

HOW YOU ACCESS IT

- Users access the Hospital Management System through a secure login portal.
- Only authorized staff such as doctors, nurses, and administrators can sign in
- The interface is easy to use and works on computers, tablets, and mobile devices,
- Access levels are controlled based on user's role (admin, doctor, receptionist, etc.).

WHERE DATA IS STORED

- All patient records, doctor details, appointments, billing information, and reports are stored in a central database.
- This database is highly secure and backed up regularly to avoid data loss
- Digital storage allows quick searching, updating, and retrieving information anytime

GET IMPORTANT REPORTS

- The system automatically generates various reports such as patient reports, billing summaries, and hospital performance reports
- These reports help in decision-making and improve hospital efficiency

KEY FEATURES

Key Feature	What They Do
● Patient Information Management	Maintains patient ID, name, address, DOB, and NHS number
● Medicine / Prescription Management	Stores tablet name, dose, storage advice, and daily dose
● Database Integration (MySQL)	Supports CRUD operations and saves records

Our Tech Tools

We used reliable technologies to build this system.

What we used:	Python Tkinter
Where data lives:	MySQL
Editor we used:	VS Code

How Our Database Works

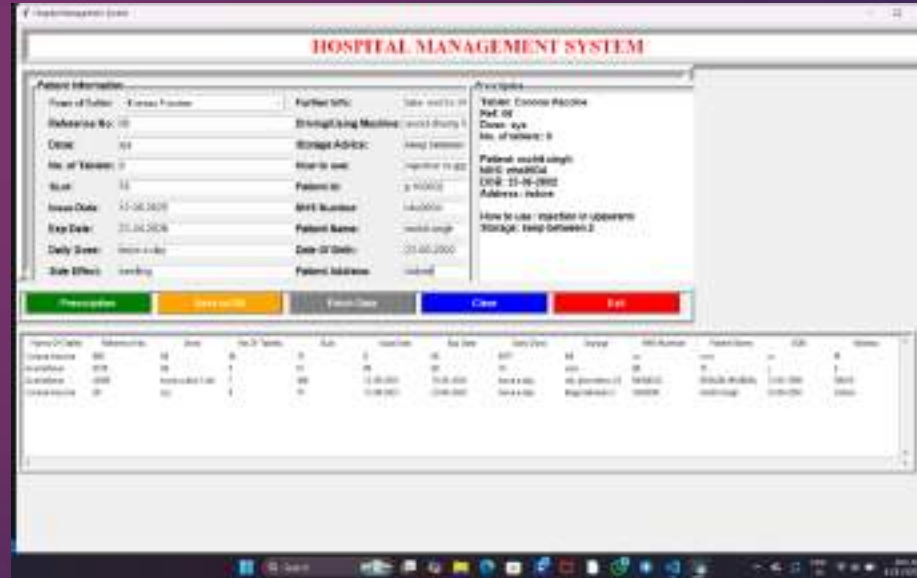

Our database has a single table that stores all patient and prescription information

PYTHON TKINTER

After filling referenced field

OUTPUT

What We Achieved & What's Next

What We Achieved

- ✓ Helps reduce errors in patient information and prescriptions
- ✓ Makes it faster to access and manage patient records
- ✓ Simplifies the process of giving prescriptions to patients

What's Next

- Add more patient-related data and history information
- Improve search functionality and data retrieval
- Integrate with other hospital systems and services

Thank You!

We appreciate your time and attention to our Hospital Management System presentation.

Questions & Discussion :)

We're ready to answer any questions you may have about the system, its features, or our implementation process.
